Dear Dr. Ahmed,

We fully agree that proper medical oversight and alignment with global best practices are essential to ensure compliance and patient trust.

To this end, our roadmap includes:

- ***Physician Oversight:*** *The tool recommends suitable specialties and doctors, while all diagnoses and medical recommendations first appear to physicians for validation before reaching patients.*
- ***Human-in-the-Loop Design:*** *AI supports data collection and triage, with final decisions remaining strictly with medical staff.*
- ***Progressive Governance:*** *A phased roll-out with monitoring and feedback to strengthen safety, reliability, and compliance.*
- ***Future Work:*** *Integration of an agent to fetch clinical guidelines (e.g., medications, labs, radiology) from trusted sources such as UpToDate to further support physicians.*

*Additionally, **the diagnosis prediction component** has already been refined through multiple revisions with **Andalusia Al Shalalat doctors under Dr. Badr's supervision**, ensuring strong clinical alignment.*

We greatly value your feedback and look forward to your continued collaboration.
